BACKGROUND KNOWLEDGE ▲

Types of disasters and damages caused by disasters are topics that appear frequently on exams. Let's review what kinds of natural disasters there are.

- 눈사태, 산사태 Avalanche, Landslide:

An avalanche is a phenomenon in which a lot of built-up snow collapses and slides away, and a landslide is a phenomenon in which mountain soil collapses and falls down due to heavy rain or an earthquake.

- 가뭄, 산불 Drought, Forest Fire:

If it doesn't rain for a long time, a serious drought can occur, so the dry weather continues and it becomes easy for forest fires to break out.

- 지진, 해일 Earthquake, Tsunami:

An earthquake is a phenomenon in which the ground cracks and shakes, and if an earthquake occurs in the ocean, a large wave called a tsunami can strike.

- 태풍, 홍수 Typhoon, Flood:

A typhoon is when strong wind and rain occur together, and if it rains heavily during this time, a flood can occur.

23. 지진

An **earthquake** hit, so many buildings collapsed.

24. 초래하다

The typhoon **resulted in** a lot of property damage.

25. 파괴(하다)

Due to the strong earthquake, roads **were destroyed** and houses collapsed.

26. 폭발(하다)

The fire that broke out in the parking lot spread to the garage, and 5 minutes later, the building **exploded**.

27. 폭우

The road was blocked as the mountain collapsed because of the **heavy rain** that poured from the morning on.

28. 피하다 ☆

People **cannot avoid** natural disasters like typhoons or earthquakes.

29. 피해 ☆

As the earthquake happened at dawn when everyone was sleeping, the **damage** was even greater.

30. 홍수

A **flood** occurred, submerging houses and roads underwater.

31. 화산

Through the **volcanic** eruption, the surrounding area was covered in smoke and volcanic ash.
