BACKGROUND KNOWLEDGE ▲

Let's learn about the frequent vocabulary term "멸종 위기 동물" ("animals in danger of extinction," or "endangered animals").

Many animals around the world are on the verge of extinction due to climate change, etc. caused by environmental pollution. "Animals in danger of extinction" refers to animals that have difficulties reproducing due to a substantially decreased population size. Asiatic black bears, mountain goats, otters, leopards, etc. are representative endangered animals. Today, in many countries in the world, great efforts are being made to protect animals that are on the verge of extinction.

09. 무리
