

01. 가라앉다

When I was young, I was amazed that big boats **didn't sink** in the water.

02. 가정(하다)

He **assumed** that his theory was correct and continued with his research.

03. 결합(하다) ☆

When oxygen and hydrogen **combine**, they become water.

04. 과학 ☆

Thanks to the advancement of **science**, we're living comfortably now, using our smartphones and computers.

05. 기호

When I was in elementary school, I saw my high school-aged brother's math book and it looked difficult because there were so many **symbols** I didn't know.

06. 깨지다

A scientist did research into why, when people drop their cell phones, the phones fall screen-side down and **break**.

07. 대체(하다)

Recently, scientists are researching the universe to find out if there are planets people can live on **instead of** Earth.

08. 도달(하다)

The light of the stars in the sky that we see is light that has **reached** Earth after a long time has passed.

09. 동일(하다) ☆

We experimented to compare the lifetime of old and new batteries under the **same** conditions.

10. 둘러싸다

Opinions for and against are in conflict **surrounding** the issue of animal testing.

11. 마찰(하다)

When you drive fast and then suddenly stop, **friction** forms between the car's tires and the ground, making heat and a loud sound.

12. 물리적

When wood is cut and made into a chair, it's called a **physical** transformation of the wood.

BACKGROUND KNOWLEDGE ▲

Science is the area of discovery and study of the world's truths and laws. Narrowly, it refers to the natural sciences that study natural phenomena and is divided into the following five categories based on what they study.

- **물리학** Physics: The study of all of the world's phenomena.
- **생물학** Biology: The study of the structures and functions of living matter such as humans, animals, and plants.
- **우주 과학(천문학)** Space Science (Astronomy): The study of observing and explaining all objects and phenomena in the cosmos.
- **지구 과학** Earth Sciences: A collective term for the disciplines that study the Earth.
- **화학** Chemistry: The study of matter and its structures, properties, methods of change, etc.

13. 발명(하다)

Edison **invented** the first phonograph that could record and play sound.

EXAM TIP ▲

Let's review similar vocabulary words that frequently appear on exams.

- **발견**: Means "to find something new."
e.g. 새로운 발견 a new discovery, 신대륙 발견 discovery of the New World, 유물 발견 discovery of relics
- **발명**: Means "to create something new."
e.g. 발명 특허 an invention patent, 종이의 발명 the invention of paper, 신기술을 발명하다 to invent new technology

14. 부피

As the balloon rises higher in the sky, the **volume** of air inside the balloon increases, causing it to burst.

15. 분자

The smallest unit of matter that doesn't lose its shape and properties is called a **molecule**.

16. 빛

If you look at the Han River on a clear day, the **light** of the sun is reflected off of the water and is dazzling.

17. 산소

Oxygen, water, and the right temperature play crucial roles for almost all living things to survive.

18. 실험(하다)

At school yesterday, in science class, we made rockets with water bottles and **experimented** to see if they would fly into the sky.

19. 영역

Thanks to technological development, the **territory** to which we can travel has expanded to include space.

20. 우주

When I look at the stars in the night sky, I wonder where the end of the **universe** could be.

21. 원리

Lately, fans without blades are popular, and I'm curious about the **principle** of creating wind without blades.

22. 응용(하다)

The many electronic products that we use were made by **applying** scientific knowledge.

23. 적용(하다) ☆

The new product released by Company A is the first product to **apply** the new technology.

24. 차단(하다)

It was revealed that products that say they **block** electronic waves emitted during the use of electronic products have no effect.

25. 착안(하다)

Cameras were created **based on** the structure of the eye.

26. 측면 ☆

As scientific technology develops, a positive **aspect** is that the life of human beings has become easier.

27. 튀다

A scientist invented glass whose pieces are not **scattered** even if it shatters.

28. 표면

If you put oil in water, the oil floats on the **surface** of the water.

29. 한계 ☆

At present, there is a **limit** in that we cannot scientifically explain where the end of the universe is.

30. 혼합(하다)

For safety, only nitrogen that **isn't mixed** with oxygen is put into airplane tires.
